

Powershell Launcher Readme

Overview

Gives the user an easy way to launch a .ps1 file, by a simple double-click on the .cmd file.

```
-----
- Powershell Launcher.cmd           Computer:L
-
- Runs the powershell script with the same base
-
- Same as dbl-clicking a .ps1, except with .cmd
- right click and 'run as admin'
-
-   ps1file: Powershell Launcher.ps1
-   as admin: false
-
-----
```

```
[Starting PS1 called from CMD]
-----
Powershell Launcher.ps1 v2024-04-29      Computer:L

This is my script. There are many others, but this

        mode: manual
samplestrparam: Normal
        IsAdmin: False

-----
Done
Press <Enter> to continue:
```

What it does

Launches a .ps1 file with the same base name as the .cmd file.
If the .cmd file ends with (as admin) then it will not proceed unless it is run as administrator
Bypasses the requirement for Set-ExecutionPolicy changes.
Guides the user to run as admin (if needed).
Uses PowerShell 7 if it is found.

Usage

Copy the .cmd to the same folder as your .ps1
Rename the .cmd to have the same base name as your .ps1
If your .ps1 requires elevation, add ' (as admin)' to the end of your .cmd name
Double-click the .cmd to launch your .ps1
